

ProjectPulse

A packaged Project-to-Profit solution for Professional Services companies

An ERP-based solution that connects service delivery, resource planning, invoice readiness, profitability, and cash visibility in a single end-to-end flow - supported by embedded analytics, AI, and integrations with your existing tools.

Ideal for companies in:

- Consulting & Advisory
- IT Services & Managed Services
- Systems Integration & Implementation
- Software Development
- Outsourcing & Nearshoring
- Creative & Digital Agencies
- Architecture & Design
- Engineering Services
- Legal Services
- Other project-based service organizations

A common challenge

When project execution, timesheets, costs, and billing are spread across multiple tools, margin and cash visibility usually arrives late - often after the damage is done.

Typical symptoms

- Unclear plan vs. actual performance until month-end
- Billing delays due to missing approvals and limited invoice readiness transparency
- Multiple "sources of truth" (PM tool, timesheet system, spreadsheets, accounting)
- Limited visibility into WIP/unbilled services and profitability by project and customer
- Hard-to-manage subcontractor costs and utilization

What ProjectPulse changes

- One consistent Project-to-Profit flow: setup → staffing → execution → billing → profitability
- Early warning signals: deviations, commitments, and blockers before they impact margin
- Role-based visibility: CEO, CFO, and COO see the same numbers - from different angles

1. What is ProjectPulse?

ProjectPulse is a packaged solution (SAP QPPS approach) designed specifically for project-based service organizations. It combines SAP Cloud ERP and SAP Project & Resource Management (PRM) capabilities, with a proven delivery method, curated analytics, and integration patterns - so you can move faster with less risk.

Base scope (what is included)

- Finance and Controlling foundation: period close, AR/AP, cash visibility, profitability structures
- Project setup and governance: templates, WBS/phase structure, milestones, budgets
- Project staffing and capacity: roles, seniority, skills, availability (employees and contractors)
- Execution capture: timesheets and cost posting (via integration)
- Plan vs. actual control: deviations, commitments, and approval workflows
- Billing models: Time & Materials, Fixed Price, and Retainer - with invoice readiness and blocking controls
- Revenue/WIP logic and margin tracking (project and customer profitability views)
- Support for typical commercial models: hardware, software and cloud resale, project services, support / retainer services, internal projects, etc.
- Integration-ready architecture (CRM, HCM, timesheets, banks, and other systems) using SAP Integration Suite patterns
- Embedded multi-entity and multi-country capabilities
- Local payroll add-on (ePayroll) where applicable
- Curated embedded analytics and business AI capabilities (SAP Joule)

Built on

- SAP Cloud ERP as the transactional core (finance and operational backbone)
- SAP Project and Resource Management capabilities to run projects end-to-end
- SAP Integration Suite approach for clean integration with other systems
- SAP embedded analytics and role-based dashboards
- SAP Business AI - SAP Joule Copilot

Optional extensions

- SAP My Timesheets app
- SAP Sales Cloud CRM
- SAP SuccessFactors HCM solutions:
 - Employee Central
 - Recruiting & Onboarding
 - Performance & Goals
 - Compensations
 - Succession & Development
 - Learning

2. How it works: the Project-to-Profit flow

ProjectPulse standardizes the key steps from project initiation to realized profit, so execution and finance stay aligned throughout delivery.

End-to-end flow

- Project setup: templates, organizational dimensions, WBS/phase structure, milestones, budgets
- Staffing: resource requests, role assignments, capacity and availability checks
- Execution: timesheets, expenses, subcontractor costs, approvals
- Control: plan vs. actual, commitments, deviations, and alerts
- Billing: T&M / Fixed / Retainer with invoice readiness and blockers
- Finance: revenue/WIP logic, profitability views, and period close alignment

What you gain immediately

- Earlier visibility into margin risks and delivery deviations
- Cleaner and faster billing cycles (less manual chasing)
- Consistent profitability reporting by project, customer, team, and service line

3. Business value by role

ProjectPulse is designed to support day-to-day operational control and executive decision-making. Below are the outcomes most clients prioritize.

CEO outcomes

- Portfolio-level visibility: performance, risks, and growth signals
- Profitability view by customer and service line to support strategic decisions
- Predictable operating rhythm with fewer surprises

CFO outcomes

- Improved cash visibility and stronger control of AR and billing cycles
- Clear WIP/unbilled services view and transparent revenue recognition logic
- Faster period close through standardization and fewer reconciliations

COO / Delivery outcomes

- Utilization and billability transparency across teams and skills
- Capacity planning and staffing discipline to protect delivery commitments
- Early detection of scope, cost, and timeline deviations

Starter Analytics Pack (examples)

- Project control overview (status, deviations, blockers)
- Project profitability (revenue, cost, margin) with drill-down
- Invoice readiness and WIP/unbilled visibility
- Utilization and billability by team, role, and period
- Cash-flow analyzer (AR/AP aging, cash indicators, DSO/DPO, liquidity views, etc.)

4. Implementation approach (4–6 months typical)

ProjectPulse delivery is structured to reduce risk and accelerate adoption.

Delivery phases

- Discover & scope: confirm objectives, roles, and success criteria
- Fit-to-Standard workshops: map your processes to best-practice flows
- Build & integrate: configuration, integrations, reporting, and security roles
- Test & train: UAT with real scenarios (T&M, fixed, retainer), super-user enablement
- Go-live & hypercare: controlled cutover and post-go-live stabilization

Change management built-in

- Super-user network and train-the-trainer sessions
- Readiness checklists (invoice readiness, close readiness, go-live readiness)
- Practical training by role (CEO/CFO/COO, PMs, finance, delivery)
- Hypercare support and continuous improvement backlog

5. Commercial (high-level)

- Cloud subscription costs from EUR 8,000 per month
- Implementation costs from EUR 100,000
- Indicative estimates - depend on scope, users, entities, countries, and integrations

6. Next step: a discovery call

In a short session, we map your current landscape and prioritize the fastest path to margin and cash visibility.

What to prepare for us

- Number of people and teams (employees + contractors)
- Your delivery model mix (T&M / fixed / retainer) and typical project duration
- Current tools (ERP, CRM, HCM, BI, timesheets ...) and key pain points
- Countries/entities

What you will get from us

- A base scope recommendation and phased roadmap
- A demo aligned to your use cases (Project-to-Profit flow + dashboards)
- An initial estimate (timeline, key assumptions, integration approach)

Why Infinus

- SAP Gold Partner
- Recognized as SAP Top Cloud Performer 2024 & 2025
- Proven SAP expertise and delivery capability
