

ProjectPulse:

From Projects to Profit in One Flow

**If your primary asset is the expertise and time of your people,
you are a Professional Services company.**

ProjectPulse is a complete SAP Cloud ERP packaged solution for Professional Services firms that connects projects, people, and finance into one end-to-end "Project-to-Profit" flow. CEOs, CFOs, and COOs finally see the same real-time numbers and can act before issues hit margin and cash.

With ProjectPulse, you get:

- One Project-to-Profit flow – from project setup and staffing to execution, billing, WIP, and profitability
- Earlier margin & cash visibility – real-time insight into utilization, WIP, unbilled services, and risks
- One version of the truth – consolidated ERP backbone for finance, delivery, and leadership

See how this could look on your numbers.

Who is it for?

Companies that sell the expertise and time of their professionals through projects and services, such as:

- Business Consulting & Advisory
- IT Services
- Software Development
- Outsourcing & Managed Services
- Creative & Digital Services
- Architecture & Design Services
- Engineering Services
- Legal Services

The problem we solve

When project execution, timesheets, costs, and billing are spread across multiple tools, margin and cash visibility usually arrive late – often after the damage is done.

How this shows up in your business:

- No clear plan-vs-actual view until month-end
- Billing delays due to missing approvals and poor invoice-readiness visibility
- Multiple “sources of truth” (PM tool, timesheet system, spreadsheets, accounting)
- Limited visibility into WIP / unbilled services and profitability by project and customer
- Subcontractor costs and utilization hard to control

What changes with ProjectPulse

- **One Project-to-Profit flow:** setup → staffing → execution → billing → profitability
- **Early warning signals:** deviations, commitments, and blockers before they hit margin
- **Shared reality for leadership:** CEO, CFO, COO see the same numbers – from different angles
- **One system of record:** all critical data and processes consolidated in a single ERP

How it works: the Project-to-Profit flow

ProjectPulse standardizes the key steps from project initiation to realized profit, so execution and finance stay aligned throughout delivery.

- Project setup – templates, dimensions, WBS/phase structure, milestones, budgets
- Staffing – resource requests, role assignments, capacity and availability checks
- Execution – timesheets, expenses, subcontractor costs, approvals
- Control – plan vs. actual, commitments, deviations, and alerts
- Billing – T&M / Fixed Price / Retainer with invoice readiness and blocker tracking
- Finance – revenue and WIP logic, profitability views, and period-close alignment

What you gain quickly

- Earlier visibility into margin risks and delivery deviations
- Cleaner, faster billing cycles (less manual chasing and rework)
- Consistent profitability reporting by project, customer, team, and service line

Business value by role

ProjectPulse is designed to support day-to-day operational control and executive decision-making. Below are the outcomes most clients prioritize.

CEO outcomes

- Portfolio-level visibility: performance, risks, and growth signals
- Profitability view by customer and service line to support strategic decisions
- Predictable operating rhythm with fewer surprises

CFO outcomes

- Improved cash visibility and stronger control of AR and billing cycles
- Clear WIP/unbilled services view and transparent revenue recognition logic
- Faster period close through standardization and fewer reconciliations

COO / Delivery outcomes

- Utilization and billability transparency across teams and skills
- Capacity planning and staffing discipline to protect delivery commitments
- Early detection of scope, cost, and timeline deviations

Commercial estimates

- Cloud subscriptions from EUR 5,000 per month
- Implementation services from EUR 100,000
- Timeline (Contract to Go-Live) 3–6 months
- Actuals depend on final scope, user count, entities, countries, and integrations

Next step: a discovery call

In a 60-minute session, we map your current landscape and identify the fastest path to better margin and cash visibility.

Helpful information to prepare

- Number of people and teams (employees + contractors)
- Your delivery model mix (T&M / Fixed / Retainer) and typical project duration
- Current tools (ERP, CRM, HCM, BI, timesheets, ticketing, etc.) and key pain points
- Countries / legal entities

What you receive from us

- A base scope recommendation and phased roadmap
- A demo aligned to your use cases (Project-to-Profit flow + dashboards)
- An initial estimate (timeline, key assumptions, integration approach)

Why Infinus

- SAP Gold Partner
- Recognized as SAP Top Cloud Performer 2024 & 2025
- Proven SAP expertise and delivery capability
