

# When a Company Outgrows Excel and Disconnected Systems

## SAP Starter Package for Growing Companies

Many successful private companies grow for years relying on a mix of different systems, Excel spreadsheets, and manual processes.

At a certain point, this way of working starts to slow the business down: data is delayed, reports become inconsistent, and management struggles to gain a clear view of profitability, inventory, and cash flow.

SAP Starter Package enables growing companies to implement a modern ERP system quickly, predictably, and without significant project risk.

The solution is built on SAP Cloud ERP – a leading business platform that integrates finance, sales, procurement, and operations into one unified system.

### When is this relevant for your company?

This package is particularly relevant if your company:

- Is growing rapidly and existing systems can no longer support business complexity
- Uses multiple disconnected or poorly integrated tools and Excel spreadsheets
- Needs better control over profitability, inventory, and cash flow
- Is planning further growth and requires a stable digital foundation

This approach is typically best suited for companies with annual revenues above **EUR 20 million** and clear growth ambitions.

## SAP Starter Package at a Glance

- Focus on core business processes
- Process optimization and automation
- Built-in analytics and AI capabilities
- Efficient implementation (4–6 months)
- Competitive pricing

## When Systems Start Holding Back Growth

In many growing companies, problems do not arise because people are underperforming, but because existing systems can no longer support the level of complexity the business has reached.

### Typical challenges management begins to notice:

- Delayed financial and operational data
- Multiple versions of the same reports
- Excessive time spent on manual data entry and reconciliation
- Limited transparency of profitability by product or customer
- Increasing complexity in inventory and cash flow management

### What Changes with SAP Cloud ERP?

**SAP Cloud ERP establishes a unified digital foundation that connects all key processes and data within a single system.**

### This enables management to:

- Work with a single version of the truth
- Gain faster insights into profitability, costs, and cash flow
- Reduce manual work and operational errors
- Standardize processes that support scalable growth
- Access real-time analytics and KPIs at any time

## SAP Starter Package Removes 4 Common Misconceptions About SAP

### 1. SAP is expensive

SAP Cloud ERP is now available through a cloud licensing model that significantly reduces upfront investment. Cloud licenses typically start from around **EUR 4,000** per month, while implementation services start from approximately **EUR 50,000** one-time.

### 2. SAP is complex and rigid

SAP Cloud ERP leverages standardized processes based on SAP best practices, enabling faster implementation and easier system management.

As an implementation partner, we ensure the project remains practical, clear, and free of unnecessary complexity.

### 3. SAP projects take too long

SAP Starter Package focuses on core processes and is typically implemented within **4–6 months**.

### 4. SAP is only for large enterprises

Today, SAP Cloud ERP is designed for mid-sized companies that need a robust business system and a reliable platform for future growth.

## What is the Focus of SAP Starter Package?

### 1. Financial Control

Better visibility of costs, receivables, payables, profitability and cash-flow

### 2. Sales & Invoicing

End-to-end visibility from sales order to invoicing and collection

### 3. Procurement & Inventory

Improved control over procurement costs and inventory management

### 4. Management Analytics

KPI dashboards and analytical insights for faster decision-making.

## Why Infinus?

Infinus helps companies implement SAP in a business-driven and operationally controlled way.

- SAP Gold Partner
- SAP Top Cloud Performer 2024 i 2025
- Team of 30+ SAP consultants
- Strong experience in local SAP implementations

**Our goal is not just software implementation, but building a stable digital foundation that supports long-term growth..**

## First Step: Digital Discovery Session

In a short discovery session, we assess together whether SAP Starter Package is the right fit for your company.

**The session typically lasts around 45 minutes.**

**By the end of the meeting, you will have a clear understanding of:**

- Whether SAP Cloud ERP is the right next step
- Which processes should be prioritized for digitalization
- What business benefits you can expect
- The estimated project scope and investment

**If you would like to explore whether SAP Starter Package makes sense for your company, we would be happy to share our experience from similar projects.**
